

Reset Unit, Touchlite, Wall mounted – **A212**

This reset unit is a touchlite membrane switch. It can be flush mounted or surface mounted on a single gang, standard electrical socket box. When a call is activated on the system the reset unit will illuminate to indicate that a call is active. By pressing the centre of the membrane switch, the call will be reset and the assurance light on the reset will switch off. This unit is available in white plastic or in powder coated steel. Other variations of the reset are also available in stainless steel and in satin chrome finishes.

Part numbers for these units are;

Plastic – A212/WH

Powder Coated – A212/PC

Stainless Steel – A212/SS

Satin Chrome – A212/SC
